Glendinning Announces a New Solution for an Old Problem

(Conway, SC) — Glendinning Marine Products, Inc., manufactures the *Cablemaster*, a shore power cord reel used by most major yacht builders — has now developed the solution for water hose storage.

The *HoseMaster* answers the challenges that many OEMs and owners of yachts face when trying to incorporate a water hose management system on board where space and dependability are key concerns. The *HoseMaster* has the easiest manual pay out action available in the industry. Glendinning has eliminated that “tug-of-war” feeling that you get with spring loaded reels. Furthermore, when its time to depart, the power retraction and storage capability of this useful product makes storage of the water hose truely effortless.

As more and more modern conveniences are being added to yachts, space and weight have become key factors in many buying decisions. The *HoseMaster* measures a slim 11” wide and weighs under 23 lbs. (with 50’ of 5/8” hose). Made to fit any storage space available.

“One of the nice things about this product is the ‘levelwind feature’ which automatically places the water hose onto the spool in a uniform manner,” reports Tom Morgan, designer of this product. “The *HoseMaster* fits in well with our commitment to bringing the manufacturer ease of installation, and the yacht owner true boating pleasure through automation. Glendinning has provided the marine industry with quality products for the past 30 years. “Relax . . . We’re onboard!”
