GLENDINNING ANNOUNCES **PRO-X** CONTROL CABLES

With a long standing reputation for manufacturing quality marine products, Glendinning Marine Products has just introduced its **Pro-X** Control Cables™ for high-quality engine control and operation.

For many years, Glendinning has manufactured and supplied control cables to the marine industry using "armored cored" technology acquired from the company's acquisition of NW Cables. Building on that success, Glendinning designed its new **Pro-X** Control Cables for high-performance operation with minimum lost motion or resistant forces. High-quality construction and high-performance design makes the **Pro-X** Control Cables the ideal choice for tough jobs.

"We offer control cables for every application imaginable," said VP of Marine Sales David Wollard. "We are extremely excited to introduce our **Pro-X** Controls Cables as our latest line of high-end, high-quality controls cables."

For more information on **Pro-X** Control Cables, contact Glendinning Marine Products 740 Century Circle, Conway, SC 29526;
