

A Smarter Way to Control Your Propulsion System

(Conway, SC) — Glendinning Marine Products, Inc., a product development company that designs, assembles, and markets electro-mechanical devices for use in the RV and marine industries — has announced the completion of their newest product ready for distribution.

Smart Actuator II™ is the latest addition to the Complete Controls™ family of electronic engine controls offered by Glendinning. Smaller and more compact than its predecessor, the Smart Actuator II™ will have wider applications for a variety of boats and is ideal for outboard, stern drive, inboard and jet drive applications. The Smart Actuator II™ continues in the tradition of innovative electronic engine controls from Glendinning with Integrated Trim Control™ at your finger tips (optional), capability of controlling three engines with 2 handles at up to six stations, Automatic Engine Synchronization, a user-friendly calibration procedure, choice of control heads including the handheld remote (optional), plug 'n play installation, and 12 or 24 volt capability.

“We are pleased to have Smart Actuator II™ as part of the Glendinning family of Complete Controls™,” says David Wollard, Vice-President / Marine Sales. “Smart Actuator II™ is ideal for multi engine outboard fishing machines as well as stern drive and inboard boats from 23 feet and up.”
